

# Cyber Security Standards for Schools and Colleges 2024

## Standard

## How GDPRiS helps you meet the standards related to digital technology

*Conduct a cyber risk assessment annually and review every term*

### Suppliers, RoPA and DPIAs

- Data Maps for more than 3,800 education suppliers to get you started
- RoPA cards provide a comprehensive overview of product data map and supporting information
- Auto-generated, part filled DPIAs to assist with due diligence and risk assessment
- Assign owners and users to systems, generate reports by user (great for when staff leave)
- Manage your contracts directly from your RoPA
- Add your own systems and data mapping, even for paper based processing
- MAT can centrally manage RoPA, feed down system subscriptions, carry out risk assessments

*Create and implement a cyber awareness plan for students and staff*

### Incident Management

- Log, track and manage cyber incidents and any associated data breach
- Run incident drills to test your cyber incident response plan
- Exclude drills from your reporting to maintain an accurate record of real incidents
- Spot trends and identify common themes
- Know where you need to make improvements
- Identify training needs
- Setup response teams for breaches and cyber security incidents so you know who needs to receive notifications and updates
- Quickly and easily report incidents to the relevant agencies
- Generate comprehensive report of the incident to provide to 3rd parties
- Manage complaints related to incident handling all in one place

*Control and secure user accounts and access privileges*

### Documents

Securely store and share:

- Policies related to data protection and cyber security
- Notify all staff, even in a multi-school organisation, when a new policy or updated policy is available
- Request read acknowledgements - evidence your staff have read the policy/update
- Store your business continuity plan, cyber incident response plan etc providing easy access in the cloud

*License digital technology and keep it up to date*

### Training

- Cyber security awareness training
- CPD certified role-based data protection training
- Report on who has/hasn't received or completed training
- Evidence training staff have received

*Report cyber attacks*

### Fully cloud-based, simple, secure administration

- Integrate with your MIS to maintain accurate staff accounts
- Supports single sign-on with Google and Microsoft
- Supports Multi-factor Authentication (MFA)
